OBJECTIVE

Versatile Full-Stack Developer with 4+ years of experience in building high-performance web applications using Magento 2, Laravel, React, and modern frontend/backend technologies. Seeking to contribute both hands-on development skills and leadership capabilities to innovative, fast-paced teams focused on scalable digital solutions.

EDUCATION

Laxmi Institute of Technology
(B.E)Computer Science Engineering

Expected 2017

B Smt. MP Lilliyawala Vidyabhavan

2011 - 2013

SKILLS

Back-End (Server-Side)

Languages: Python, PHP
Frameworks: Magento2, Laravel (PHP), Django (Python)
Databases: MySQL, PostgreSQL, MongoDB

Front-End (Client-Side)

Languages: JavaScript, TypeScript, HTML5, CSS3
Frameworks/Libraries: React, Redux, Zustand, jQuery, Next.js
UI/UX Tools: Bootstrap, Tailwind CSS, Material UI, Chakra-UI

DevOps and Deployment:

- 1 Docker: Skilled in containerizing applications, writing efficient Dockerfiles, managing multi-container setups with Docker Compose, and optimizing container performance
- 2 Experience with CI/CD pipelines (GitHub)
- 3 Working with Linux-based servers and shell scripting
- 4 Maintenance - performance optimization and bug fixing

EXPERIENCE

Team Lead, Full-Stack Developer

Aadhyatech Solution

Jun 2023 - Present

Ahmedabad, IN

- Led a full-stack development team (frontend + backend).
- Architected and implemented end-to-end solutions using Magento 2 (PHP), JavaScript for custom frontend components, and MySQL for scalable data handling.
- Integrated third-party systems (payment gateways, SAP, shipping APIs) and developed custom REST APIs to enable seamless communication between services.
- Improved performance and user engagement, reducing page load times.
- Optimized site speed and performance, reducing load times by up to 45%, which directly contributed to a 20% increase in user retention and 12% growth in revenue for major clients.
- Ensured CI/CD implementation using GitHub Actions and Docker, reducing deployment time and minimizing downtime during updates.
- Coordinated with stakeholders and clients, translating business requirements into technical plans, and ensuring alignment across all phases of development.

Full-Stack Developer

Globalia Soft LLP

Apr 2021 - Jun 2023

Surat, IN

- Led the full integration of Magento with SAP, enabling real-time data synchronization across inventory, orders, and customer records for improved operational efficiency.
- Developed custom Magento themes and modules tailored to both B2B and B2C use cases, enhancing UI/UX and aligning with unique client branding and functional needs.
- Optimized backend workflows and APIs, significantly reducing processing time and improving data reliability across multiple eCommerce touchpoints.
- Improved platform performance and scalability, resulting in better load handling, faster page speeds, and increased client satisfaction across multiple project deployments.

Naresh IT

Software Development

Feb 2020 - Feb 2021

Hyderabad, IN

- Completed a comprehensive one-year software development training program at a renowned IT institute.
- Acquired practical skills and hands-on experience in various programming languages, software development methodologies, and modern technologies.
- Developed a strong foundation in coding, debugging, and software design, preparing for a dynamic career in software development.

PROJECTS

Adar Uniforms

Developed a custom Magento-based eCommerce platform for Adar Uniforms, integrating third-party APIs, optimizing site performance, and enhancing UX for both B2B and B2C customers, resulting in increased engagement and streamlined order management.

Quintal Stall

Developed a multi-vendor marketplace for Quintal Stall using React and Laravel. Built custom APIs, vendor/admin dashboards, and a responsive frontend. Enabled seamless vendor onboarding, product management, and secure transactions for scalable eCommerce.

Game Hub

Built Game Hub using Vite, React, TypeScript, HTML, and CSS. The platform displays the latest games with detailed info, offering a fast, responsive UI. Integrated API calls for real-time data, ensuring users get up-to-date game listings and smooth navigation.
